

# Townsville Suicide Prevention Community Action Plan

# Acknowledgements

---

We acknowledge the Traditional Owners of the Townsville region, the Nywaigi, Bindal and Wulgurukaba and Gugal people. We further acknowledge the Traditional Owners of Palm Island, the Manbarra people and the Historical Custodians, the Bwgcolman people (Many Tribes). We pay our respects to Elders past, present and emerging. We also extend that respect to all the other Aboriginal and Torres Strait Islander people from other regions who are a vital part of our community.

## Lived experience

We acknowledge all people who have had any direct experience of suicide, including those who have attempted suicide or those that have been impacted or bereaved by suicide. We acknowledge their courage and tenacity to carry and move through the immense pain. The voice of people with lived experience is essential in the development of the work that we do.

## Black Dog Institute

We acknowledge the Black Dog Institute as the only medical research institute in Australia to investigate mental health and suicide prevention across the lifespan. By providing suicide prevention specific expertise in relation to the LifeSpan model as well as a compelling Suicide Data Analysis Report, we will ensure that the Townsville SPCAP is data-driven and informed by leading practice.

## Participants

We would like to acknowledge the many community members, government, non-government organisations and service providers who shared their knowledge, expertise, and stories to help develop this and future Community Action Plans. We further acknowledge the work and efforts made by previous selectability employees and members of the Townsville Suicide Prevention Network (TSPN) on past Community Action Plans. We also thank those courageous people who work and/or volunteer in this field, making a difference in the lives of others.

## Northern Queensland Primary Health Network

We would like to thank Northern Queensland Primary Health Network (NQPHN) for funding the development of the SPCAP as well as supporting the direct involvement of the passionate and committed NQPHN team in developing the SPCAP along the way.

**“The Townsville Suicide Prevention Network is driven to deliver on this plan, and build a strong basis for ongoing support, funding and collective initiatives into the future.”**

**Danielle Hornsby**

TSPN Chair

*B.Speech Therapy, MBA (Marketing and Info Systems), AICD*

## Foreword

Welcome to the third edition of the Suicide Prevention Community Action Plan (SPCAP) for the Townsville Region.

In preparing this action plan, we have taken the time to consult with agencies and communities to listen to the needs of those across our region. The response, input and feedback has been incredibly important in shaping the 2022 Townsville SPCAP.

Of course, people in our regions have had their individual struggles over the past couple of years, with the threat of COVID-19 and the anxiety, isolation, and social disruption it has caused in our region.

It has presented different challenges for agencies who have an increasing demand for their services, on the backdrop of organisational, workforce and logistical interruptions.

Our network brings those groups together to lean into the challenges of the future, to combine our perspectives, knowledge and leadership to build stronger and more resilient systems.

Our footprint of services, communities and people are as diverse as they are unique... and whilst this could divide us, instead it unites us to find new and innovative ways to bring people together to achieve our vision.

We are well placed to build on our foundations, because of the people and groups who have come before us, we have a strong network of likeminded agencies working together.

Especially pleasing is the way that local groups have realised their own aspirations to take local action, for their community.

Particularly, we acknowledge the leadership in the Burdekin Suicide Prevention Network who have developed a solid base for gearing and supporting localised plans for local results.

This is the platform we seek to leverage in the coming period of our plan, and we hope that new groups can be supported to deliver in other regions.

Finally, without the financial support of the NQPHN, the development of this plan would not have been possible. We thank selectability for supporting this plan as part of the PHN funding. Our network is driven to deliver on this plan, and build a strong basis for ongoing support, funding and collective initiatives into the future.

Yours sincerely,

**Danielle Hornsby**

Townsville Suicide Prevention Network Chair

# Seek help

Some people may find the content of the SPCAP to be confronting and/or distressing. If this is the case, please contact any of the services listed below.

# Background

---

## About the SPCAP

The purpose of the Townsville Suicide Prevention Community Action Plan (SPCAP) initiative is to lead the collaborative development of a community and sector endorsed path forward for coordinated suicide prevention activities across the Townsville region.

This SPCAP further includes Charters Towers, Ingham and Palm Island, which we recognise as key regional areas with their own unique communities that require suicide prevention initiatives.

The project will be delivered through a partnership led by selectability, one of regional Queensland's largest and leading providers of mental health services, supported by the Black Dog Institute, funded by NQPHN and guided by our communities, and particularly those with a lived experience of suicide.

## About this document

The SPCAP comprises of two main sections:

### Whole of region strategy

The purpose of this document is to set out the background, rationale and strategic drivers aligned to the Black Dog Institute's **LifeSpan framework**.

### Actions register

This lists detailed actions, including a description, implementation steps, key stakeholders, and timeframes.

It contains actions which may be implemented at a whole-of-region level or locally.

It is not intended that all actions will be implemented simultaneously, but rather this document will assist local teams to prioritise actions for implementation.

# Strategic directions

---

## Vision

There will be significantly fewer people dying by or contemplating suicide in our communities.

## Mission

The Townsville Suicide Prevention Network work together to raise awareness, listen to our communities and take combined action to reduce suicide in our region.

## Outcomes

Our focus is on increasing community capacity and awareness, to recognise and respond to people in distress, better coordination of suicide prevention efforts and a reduction of suicide attempts and deaths.

# Principles

---

## The key principles supporting the LifeSpan framework and adopted by the SPCAP are:

- **Data-driven decision making**

Planning of suicide prevention activities is evidence-based, informed by collecting, analysing, interpreting, and mapping available data that is locally relevant.

- **Workforce development**

Health and community services professionals and frontline workers play a critical role in suicide prevention. Training and knowledge sharing is key to supporting workers in preventing suicide.

- **Lived experience recognition and inclusion**

We acknowledge the invaluable contribution of those with a lived experience of suicide who must be included at all stages of decision making, implementation, and evaluation of the SPCAP.

- **Local ownership and adaptation**

Local communities must own the implementation of the SPCAP. Actions have intentionally been left high-level so that localised implementation teams may adapt them to suit the region.

- **Community engagement**

The community all have a role to play in suicide prevention. As much as possible, the plan's implementation should be community led and should be designed to meet community needs.

- **Cultural governance and inclusion**

Any initiative must be led and owned by the community to ensure that they are done in their best interest and in the most appropriate manner.

# Our communities of interest

---

The Townsville Suicide Prevention Community Action Plan (SPCAP) covers the following areas of the Townsville Hospital and Health Service.

- **Hinchinbrook Shire Council**
- **Palm Island Aboriginal Shire Council**
- **Townsville City Council**
- **Charters Towers Regional Council**
- **Flinders Shire Council**
- **Richmond Shire Council**

It does not cover Ayr and Home Hill which are covered in the Burdekin Suicide Prevention Community Action Plan.

# Regional **need**

---

# Townsville

---

## Population

Outside the southeast corner, Townsville is the largest city in regional Queensland.

The current population count is 196,800 people (*ABS estimated resident population, 30 June 2020*). By 2041, Townsville's population is estimated to be at 282,281 people (*Queensland Population Projections, 2018 edition*).

## Economy

Townsville has a diverse economy that features retail trade, health and education services, government administration, defence, construction, mining, manufacturing, property and business services.

It is a major service centre, and the main centre for government administration outside of Brisbane.

Regional health services are provided by the Townsville Hospital & Health Service.

Queensland Rail and the Port of Townsville provide a transport hub for the region's mining and agricultural industries, as well as for locally-based Xstrata Copper Refinery, Sun Metals Zinc Refinery and the Queensland Sugar Corporation Distribution Centre.

There are a number of research institutions such as James Cook University, the Australian Institute of Marine Science, the Great Barrier Reef Marine Park Authority, Department of Agriculture, Fisheries and Forestry, and the CSIRO.

Furthermore, Townsville has a significant Australian Defence Force community due to the presence of army and air force bases.

# NQPHN health needs assessment 2019-22

The NQPHN Health Needs Assessment 2019-2022 (*hereinafter referred to as HNA*) has identified a need for increased suicide prevention activities in the region.

The overall age-standardised rate for suicide nationally is 10.9/100,000 rates. However, the suicide rates in Townsville were reported as 30 per cent higher (14.2/100,000) than the national average, marked by a high percentage of male, as well as Aboriginal and Torres Strait Islander suicides.

Regarding hospitalisations for self-harm and various mental conditions, Townsville fared higher than the NQPHN regional averages:

## **For schizophrenia and delusional disorders**

- 28/10,000 compared to the NQPHN regional average of 22/10,000 in 2015-16 reporting period.

## **For anxiety and stress episodes**

- 14/10,000 compared to the NQPHN regional average of 12/10,000 in 2015-16 reporting period.

For the three years 2011 to 2013, data prepared by the Australian Institute for Suicide Research and Prevention (AISRAP) for NQPHN provides analysis of 328 suicides in the region, of which 225 (69 per cent) were male, and 49 of 321 (15 per cent). Of these deaths, 98 (30 per cent) occurred within the Townsville Hospital & Health Service region.

NQPHN has identified several barriers to effective suicide prevention activities throughout the region, including:

- Lack of coordination between primary health care service and related mental health and suicide prevention services.
- Lack of suicide prevention programs and response protocols in rural areas.
- Issues with current suicide prevention activities including:
  - suicide prevention models being culturally ineffective
  - limited number of services
  - lack of sector coordination
  - lack of awareness of evidence-based interventions
  - difficulty accessing services
  - a need to develop greater capacity within services.

Furthermore, the HNA advocates for a regional approach to suicide prevention that should target these barriers and provide region-wide solutions to identified needs.

# Charters Towers

---

## Population

Charters Towers is situated 136 km south-west from Townsville.

In the 2016 census, Charters Towers had a population of 8,120 people. By 2041, its population is estimated to reach 8,365 (*Queensland Population Projections, 2018 edition*).

## Economy

Charters Towers is a productive agricultural and mining region with a rich gold mining history, beautiful heritage buildings, natural attractions, and a strong community.

The Burdekin River provides the region with a strong supply of water, and the region has a wealth of mineral deposits, fertile soils, and solar energy opportunity.

The Agriculture, Forestry and Fishing industry had the largest number of total registered businesses in Charters Towers Regional Council, comprising 40.4 per cent of all total registered businesses, compared to 8.9 per cent in Queensland.

## Primary research

Our primary research in collaboration with the Charters Towers Community

Advisory Network further underlines similar issues with current suicide prevention activities, including:

- limited mental health services
- lack of awareness of available interventions
- service accessibility and staffing issues

### We have additionally identified that:

- Stigma around mental health and illness is a troublesome barrier.
- Long distances to service appointments cause rural property owners to miss work to seek support, which is not an ideal long-term arrangement.
- The highest rates of suicide are found in men aged 18 to 35 from low socio-economic backgrounds.

# NQPHN health needs assessment 2019-22

The HNA has identified a need for increased suicide prevention activities in the region.

Regarding hospitalisations for self-harm and various mental conditions, the Charters regions fared higher than the NQPHN regional averages:

## **For schizophrenia and delusional disorders**

- 31/10,000 compared to the NQPHN regional average of 22/10,000 in 2015-16 reporting period.

## **For anxiety and stress episodes**

- 14/10,000 compared to the NQPHN regional average of 12/10,000 in 2015-16 reporting period.

## **For depressive episodes**

- 17/10,000 compared to the NQPHN regional average of 12/10,000 in 2015-16 reporting period.

The NQPHN HNA 2022-2024 further emphasises the significance of psychologists as a core professional group that is essential for the delivery of primary and community mental health services. However, psychologist workforce availability varies significantly between different regions in the catchment.

The Charters region is the most underserved among all NQPHN SA3 regions with only 0.1 FTE psychologists per 1,000 population (*compared with 0.6 for Townsville and 0.8 for Cairns*).

NQPHN has identified several barriers to effective suicide prevention activities throughout the region, including:

- Lack of coordination between primary health care service and related mental health and suicide prevention services.
- Lack of suicide prevention programs and response protocols in rural areas.
- Issues with current suicide prevention activities including:
  - suicide prevention models being culturally ineffective
  - limited number of services
  - lack of sector coordination
  - lack of awareness of evidence-based interventions
  - difficulty accessing services
  - a need to develop greater capacity within services

## **Charters Towers SPCAP**

It is envisaged that with the assistance of the TSPN the Charters Towers region will have its own SPCAP in the near future.

# Ingham

---

## Population

Ingham is located in the Shire of Hinchinbrook, which is situated approximately 110 km north of Townsville.

In the 2016 census, the locality of Ingham had a population of 4,426 people. By 2041, Ingham's population is estimated to reduce to 3,514 people (*Queensland Population Projections, 2018 edition*).

## Economy

Ingham is the service centre for many sugarcane plantations, which are serviced by the two sugar mills located in the Ingham district: Victoria Sugar Mill, which is the largest sugar mill in Australia, and Macknade Mill, which is the oldest operating sugar mill in Queensland.

Sugar comprises 97 per cent of the value of agricultural production in Ingham (*ABS, 2010/2011*).

Other industries in the Ingham area include cattle, watermelons, rice, horticulture, fishing, timber and tourism. Ingham is also the administrative centre for the Shire of Hinchinbrook.

## Primary research

Our primary research in collaboration with the Hinchinbrook Community Support Centre also underlines similar

issues with current suicide prevention activities, including:

- limited mental health services
- lack of awareness of available interventions
- service accessibility and staffing issues

**In addition, we have also identified that:**

- Stigma around mental health and illness is a troublesome barrier.
- The highest rates of suicide are found in middle aged men with a farming background.

# NQPHN health needs assessment 2019-22

The HNA has identified a need for increased suicide prevention activities in the region.

Regarding hospitalisations for self-harm and various mental conditions, the Ingham regions fared higher than the NQPHN regional averages:

## **For schizophrenia and delusional disorders**

- 31/10,000 compared to the NQPHN regional average of 22/10,000 in 2015-16 reporting period.

## **For anxiety and stress episodes**

- 14/10,000 compared to the NQPHN regional average of 12/10,000 in 2015-16 reporting period.

## **For depressive episodes**

- 17/10,000 compared to the NQPHN regional average of 12/10,000 in 2015-16 reporting period.

The NQPHN HNA 2022-2024 further emphasises the significance of psychologists as a core professional group that is essential for the delivery of primary and community mental health services. However, psychologist workforce availability varies significantly between different regions in the catchment.

The Ingham region is the most underserved among all NQPHN SA3 regions with only 0.1 FTE Psychologists per 1,000 population (*compared with 0.6 for Townsville and 0.8 for Cairns*).

NQPHN has identified several barriers to effective suicide prevention activities throughout the region, including:

- Lack of coordination between primary health care service and related mental health and suicide prevention services.
- Lack of suicide prevention programs and response protocols in rural areas.
- Issues with current suicide prevention activities including:
  - suicide prevention models being culturally ineffective
  - limited number of services
  - lack of sector coordination
  - lack of awareness of evidence-based interventions
  - difficulty accessing services
  - a need to develop greater capacity within services.

## **Ingham SPCAP**

It is envisaged that with the assistance of the TSPN the Ingham region will have its own SPCAP in the near future.

# Palm Island

---

## Population

Palm Island constitutes a group of 16 islands, split between the Shire of Hinchinbrook and the Aboriginal Shire of Palm Island. Per the 2016 census, Palm Island had a population of 2,455, of whom 74.5 per cent identified as Aboriginal and 12.8 per cent identified as Torres Strait Islander. By 2041, Palm Island's population is estimated to increase to 3,544 (*Queensland Population Projections, 2018 edition*).

## Economy

Due to its history of personal, social and cultural disadvantage, and the absence of usual land tenure and property rights, the economy of Palm Island is highly constrained.

Palm Island experiences very high unemployment (52.8 per cent vs 6.2 per cent average for Queensland. *Australian Govt Dept of Employment, 2016*) and high rates of reported crime.

With 100 percent of Palm Island residents falling within the most disadvantaged quintile, Palm Island is considered highly disadvantaged in socio-economic terms. The community has a significant deficit of imports over exports, another clear measure that Palm Island consumes significantly more than it produces.

The biggest contributing industry sector to the local economy is public administration and safety followed by rental, hiring and real estate services and health care and social assistance.

## Primary research

Our primary research in Palm Island has identified key issues, including:

- limited mental health services
- lack of awareness of available interventions
- service accessibility and staffing issues

### **In addition, we have also identified that:**

- Stigma around mental health and illness is more severe due to cultural reasons. While women may occasionally speak about their mental health, men rarely do so.
- Multiple cultural barriers make it difficult for community members to seek support.
- Privacy concerns are paramount as community members do not feel conformable opening up to professionals about their mental ill health due to possible disclosure of their condition to the community.
- Five people have already lost their lives to suicide in 2022. They were all in their mid-30s with complex issues, including illicit drug and alcohol misuse.

# NQPHN health needs assessment 2019-22

The following observations from the HNA highlight areas of significant concern for Palm Island communities, particularly in relation to mental wellbeing and suicidality:

- 100 per cent of the population is in the most disadvantaged quintile.
- Children in the region are developmentally vulnerable to social competence, communication skills and emotional maturity, possibly due to family conditions and quality of parenting.
- 72.9 per cent of primary and secondary school students surveyed reported high levels of psychological distress and high exposure to high risk factors for self-harm.
- Disproportionately high levels of alcohol consumption were reported, with people aged 18 years and over consuming more than two standard alcoholic drinks per day at 20.2 per cent, which compares to 17.2 per cent for Queensland.

## Palm Island SPCAP

It is envisaged that with the assistance of the TSPN the Palm Island region will have its own SPCAP in the near future.

# Systems approach

---

**Suicide prevention is a complex health and social policy area with responsibility shared across both health and non-health systems.**

The SPCAP has been developed in direct alignment with **Black Dog Institute's LifeSpan framework**.

LifeSpan is an integrated framework for suicide prevention. It combines nine strategies that have evidence for suicide prevention into one community led approach incorporating health, education, frontline services, business and the community.

The LifeSpan framework aims to build a safety net for the community by connecting and coordinating new and existing interventions and programs and building the capacity of the community to better support people facing a suicide crisis.

LifeSpan involves the implementation of evidence-based strategies simultaneously within a localised area.

These strategies are based on the most up-to-date evidence drawn from similar, large-scale suicide prevention programs overseas that have shown positive results.

The **nine evidence-based strategies** are implemented from whole of population level to the individual level, simultaneously within a localised region.

For effective delivery, all strategies require a thorough consultation and review process to ensure their relevance and tailoring to the local context and community.

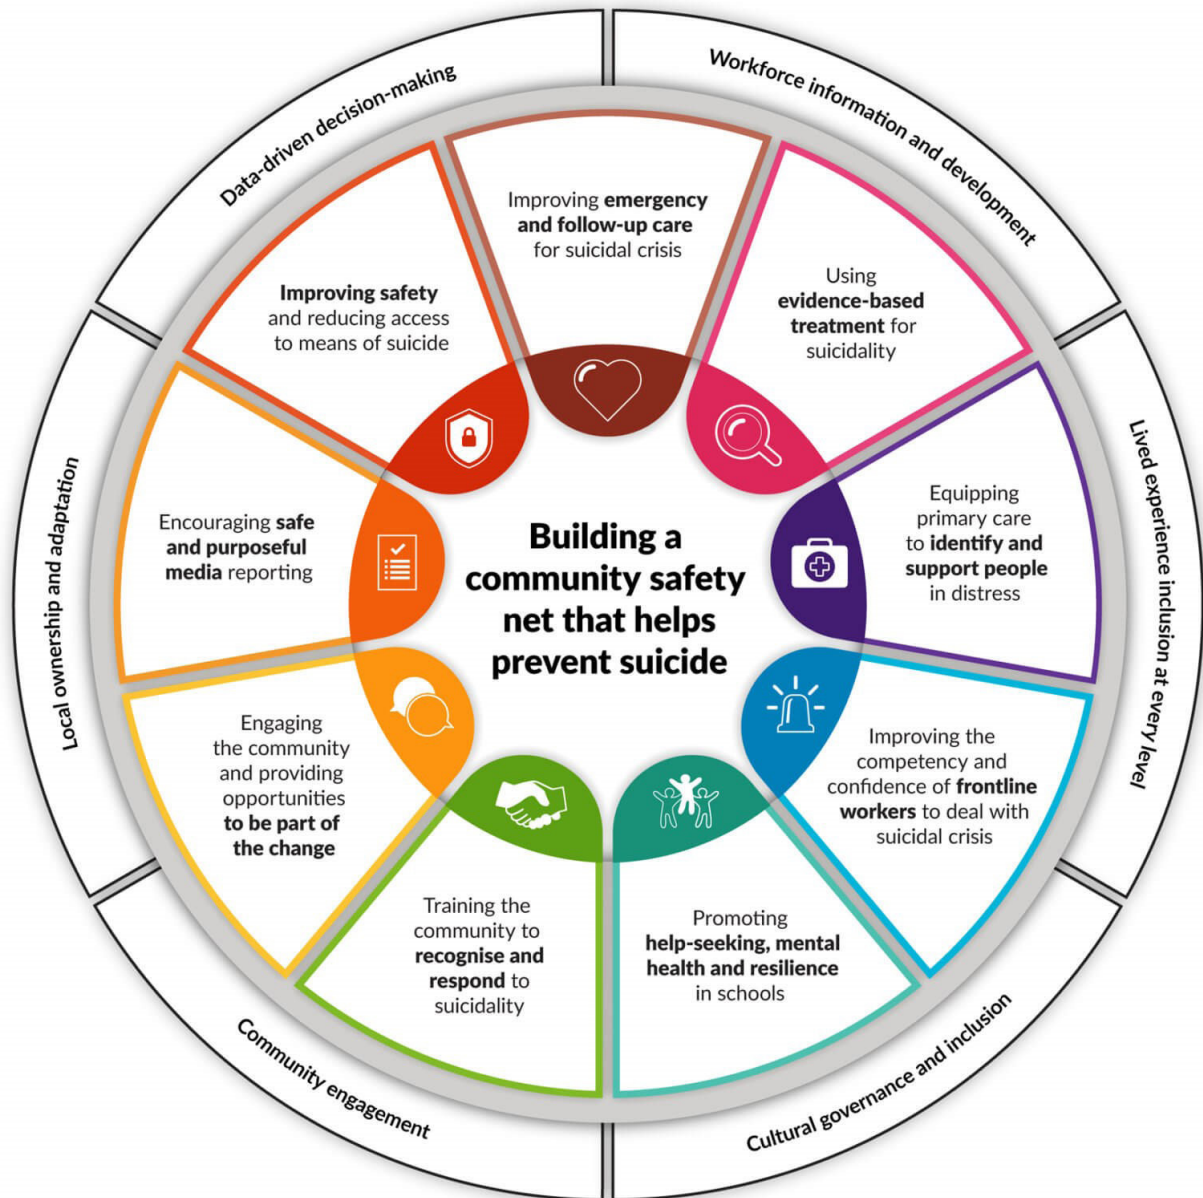

Recognising that multiple strategies implemented at the same time are likely to generate bigger effects than just the sum of its parts, LifeSpan offers a data driven, evidence-based approach, setting it apart from current practice and raising the bar in suicide prevention (*Source: Black Dog Institute's LifeSpan Framework*).

In addition to the nine LifeSpan Framework strategies, a tenth strategy was included to the SPCAP approach in consultation with the community in 2017. This is explained further in the document.

# LifeSpan Framework

The SPCAP is aligned with **Black Dog Institute's LifeSpan Framework**. High-level actions have been developed to allow prioritisation and refinement of key actions, and for local implementation teams to tailor their responses to the needs of their communities.

# SPCAP **focus areas**

---

## **Actions register key**

- Hinchinbrook Shire Council (**HSC**)
- Palm Island Aboriginal Shire Council (**PIASC**)
- Townsville City Council (**TCC**)
- Charters Towers Regional Council (**CTRC**)
- Flinders Shire Council (**FSC**)
- Richmond Shire Council (**RSC**)

# Strategy **one**

---

**Improving emergency and follow-up  
care for suicidal crisis**

# Strategy one

A suicide attempt is the strongest risk factor for subsequent suicide. To reduce the risk of future attempts, a coordinated approach to care for people after a suicide attempt is essential. Coordination of care is complex and emergency departments are high-pressure environments where staff are often time poor.

Often people who present in emergency departments (EDs) for suicidal ideation or attempts don't receive the care and support they need. Evidence shows that it is the experience rather than strict adherence to a protocol that makes the difference between good and poor care.

When people seek help, services need to make them feel validated, welcome, and heard (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- There is a need for upskilling for crisis, support, suicide risk and follow up care after an attempt.
- Wait times and impersonal triage processes are barriers to effective crisis care.
- Key government stakeholders need accountability to provide a consistent and coordinated care pathway.
- There is a clear and identified need for support services to deliver care outside of normal business hours and alternate options for people to present when feeling suicidal or at risk of harm to self, including safe haven cafés or safe houses.
- The community does generally not understand pathways through the system.

## Strategy **two**

---

### **Using evidence-based treatment for suicidality**

# Strategy two

Ensuring that accessible and appropriate mental health care is available to those who need it the most. Mental illness, including depression, is associated with a large portion of suicide attempts. Providing accessible and appropriate mental health care is essential to suicide prevention.

Central to this is ensuring mental health professionals are aware of the latest evidence and best practice care and treatment options. Information sharing between care providers also needs to be enhanced (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- The bereaved become particularly vulnerable once mourning processes are over.
- There are delays in 'real-time' data being made available, which creates a gap of when and where services and referral pathway responses are needed.
- There are many services, but people do not know what is available, how to access them and whether they are available after hours.
- Promotion of service providers who are most appropriate and responsive to identified risk-groups is needed.
- System navigation is required for when a person requires help but is not in crisis.
- A central location or 'one-stop-shop' for supports (*i.e. Oasis for ex-ADF*) would assist greatly in improving mental health access to the community.

## Actions register

ACTION	DELIVERABLES	STAKEHOLDERS	TIMEFRAME

The model is currently being implemented at selectability with potential to scale across region.</li> </ul>

## Strategy **three**

---

**Equipping primary care to identify  
and support people in distress**

# Strategy three

Suicidal individuals often visit primary care providers in the weeks or days before suicide, yet many do not mention their suicidal thoughts to their doctor. There are many reasons for this including fear, stigma, and time pressures. GPs are often unaware of referral pathways and current best practice care and treatment. Encouraging evidence-based practice and integration with other services is critical.

Capacity building and education for GPs is one of the most promising interventions for reducing suicide (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- Buy-in from professionals within respective fields is required for this strategy to be successful.
- Wellbeing screening can occur from the moment a patient enters the GP clinic. This will assist the GP to gain a better understanding of a patient's mental health.
- GPs have limitations due to time and the number of patients they must see.
- Upskilling is necessary (*i.e. implementation of the Screening Tool for Assessing Risk of Suicide [STARS]*) to strengthen understanding and cues from a person at risk.

## Strategy **four**

---

**Improving the competency and confidence of frontline workers to deal with suicidal crisis**

# Strategy four

The interactions a suicidal person has with frontline staff (*i.e. police, paramedics, and ED staff*) can influence their decision to access and engage with care. Frontline staff can play a key role in de-escalating a crisis and improving safety. Existing training may not include the latest emerging research and skills require periodic refreshing.

When vulnerable people seek help, frontline staff need to make them feel safe and heard. Evidence shows that it is the experience, rather than strict adherence to protocol, that can make the difference. Staff exposed to stressful situations and trauma can themselves become vulnerable to suicide.

Offering training to those on the frontline can build their capacity to respond to those in need – both members of the community and colleagues who may be vulnerable due to trauma (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- There is a need to overcome negative stigma around seeking help.
- A peer-support system is vital for frontline personnel working in these areas.
- Many organisations are proactive in providing training in crisis intervention and vicarious trauma.
- Former and retired frontline staff can provide incredible support for active workers; however, it is essential to note that they may be vulnerable to vicarious trauma.

## Strategy **five**

---

**Promoting help-seeking, mental health and resilience in schools**

# Strategy five

Young people can be particularly vulnerable to mental health problems, self-harm, or suicide. Schools are keen to support their students but often don't know how to choose quality programs or integrate programs with other student wellbeing activities and referral pathways.

Youth Aware of Mental Health (YAM) is designed to raise awareness about suicidality and the factors that protect against it.

YAM has the strongest evidence-base of school programs reviewed including the best outcomes specific to suicidal behaviour, and the flexibility to be integrated into any school environment (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- School curriculum has limited capacity to include programs on resilience.
- According to headspace data, there is high complex trauma among young people in the Townsville region.
- There is a vast difference in the resilience, mental health and wellbeing needs between various school catchments.
- There are groups within the community carrying a higher risk of trauma (*First Nations, LGBTQIA+, ADF families, etc*).
- Floods, global disasters and economic factors have an impact on young people's resilience.

## Strategy **six**

---

**Training the community to recognise  
and respond to suicidality**

# Strategy six

Many people who are experiencing suicidal thoughts communicate distress through both words and actions, but these warning signs may be missed or misinterpreted. Training can provide people with the knowledge and skills to identify warning signs that someone may be suicidal, talk to them about suicidal thoughts and connect them with professional care. By building a network of ‘helpers’ in our community we will strengthen our local safety net. Some people are natural helpers while others provide help through the work they do. Everyone in the community has the potential to be a helper but the best way to reach many helpers is via workplaces.

While there are many training programs that deliver skills in mental health awareness, QPR has the most and strongest evidence for building skills to help with a suicidal crisis (*Source: Black Dog Institute’s LifeSpan Framework*).

## What we know

- Affordable ‘train the trainer’ programs are required on an ongoing basis due to the transient nature of Townsville’s population.
- There is limited suicide prevention training coordination across organisations, communities and the greater region.
- Engagement of community stakeholders is required to continue providing training.
- Regular training is needed to enable support workers from various sectors (*including volunteers*) with self-care skills.

## Actions register

ACTION	DELIVERABLES	STAKEHOLDERS	TIMEFRAME
Deliver effective suicide prevention gatekeeper training across the region, with focus on high-risk workplaces	<p>Most people at risk of suicide do not consult with health care professionals on time. However, friends, family, co-workers, and others can help if they know how to recognise and respond to suicide risk. Gatekeeper training helps with identifying individuals who are demonstrating warning signs so that they can be supported in a timely manner.</p> <p>Audiences for gatekeeper training include those who have regular contact with people who may be at increased risk for suicide, such as:</p> <ul style="list-style-type: none"> <li>• high school teachers and students</li> <li>• first responders</li> <li>• faith community leaders</li> <li>• people who work with older adults, LGBTIQA+, youth etc</li> <li>• staff in the criminal justice system</li> <li>• staff in health care settings</li> <li>• high-risk industries and workplaces, particularly those who employ men</li> </ul>	<ul style="list-style-type: none"> <li>• Local Council</li> <li>• Community-based organisations</li> <li>• Sports clubs</li> <li>• Other local groups</li> <li>• Suicide prevention training providers</li> <li>• Industry specific suicide prevention training providers</li> </ul>	<ul style="list-style-type: none"> <li>• 12-24 months.</li> </ul>

<p><b>(continued)</b></p> <ul style="list-style-type: none"> <li>• HSC</li> <li>• PIASC</li> <li>• TCC</li> <li>• CTRC</li> <li>• FSC</li> <li>• RSC</li> </ul>	<ul style="list-style-type: none"> <li>• Engage with local communities regarding their community gatekeeper training needs.</li> <li>• Map all suicide prevention gatekeeper training offerings and providers.</li> <li>• Develop community gatekeeper training strategy.</li> <li>• Deliver activities in line with strategy.</li> </ul> <p>For high-risk workplaces:</p> <ul style="list-style-type: none"> <li>• Develop project plan based on leading research of high-risk industries.</li> <li>• Develop industry gatekeeper training strategy.</li> <li>• Map industry specific training offerings and providers.</li> <li>• Deliver activities in line with industry specific gatekeeper training strategy</li> </ul> <p><b>Training could take variable forms</b></p> <ul style="list-style-type: none"> <li>• Mental Health First Aid</li> <li>• Applied Suicide Intervention Skills Training</li> </ul>		
<p><b>Develop local suicide prevention gatekeeper networks and protocols</b></p>	<p><b>The local gatekeeper network would leverage members of the community who have undertaken gatekeeper training to provide a network of informal support which could be readily accessed by the community.</b></p> <ul style="list-style-type: none"> <li>• Design support structure to maintain gatekeeper network over an extended period.</li> <li>• Provide a supportive environment.</li> <li>• Recruit community members who have received gatekeeper training into the network.</li> <li>• Recruit community members who have a lived experience of suicide into the network.</li> <li>• Provide immediate access to emergency and support services through readily available mobile apps such as the selectability Well Man app.</li> </ul>	<ul style="list-style-type: none"> <li>• General community and community-based organisations</li> <li>• Trained gatekeepers</li> </ul>	<ul style="list-style-type: none"> <li>• &gt;12 months.</li> </ul>

## Strategy **seven**

---

**Engaging the community and  
providing opportunities to be part of  
the change**

# Strategy seven

Community engagement and communication delivered in conjunction with other evidence-based suicide prevention strategies can improve local awareness of services and resources, and drive increased participation in prevention efforts across the community. Engagement in campaigns and activities such as R U OK? Day can provide an important first step for many community members.

Some people may wish to take the next step: undertake training so they can recognise risk and connect others with professional support (*Source: Black Dog Institute's LifeSpan Framework*).

## What we know

- It can be challenging to engage network and community members to drive and attend these events.
- Continued support across government, not for profit and private organisations is essential.
- It is difficult to have campaigns gain momentum where there are fewer volunteers.

# Strategy **eight**

---

## **Encouraging safe and purposeful media reporting**

# Strategy eight

Suicidal behaviour can be learned through the media. Media guidelines supporting the responsible reporting of suicide by the media can reduce suicide rates, and in providing safe, quality media coverage, improve awareness and help seeking. Australia leads the world in application of the evidence around media and suicide yet there can be a misunderstanding and ‘fear’ of media guidelines.

We are supporting local organisations to take a more proactive and coordinated approach to engaging with the media and managing this conversation (*Source: Black Dog Institute’s LifeSpan Framework*).

## What we know

- Through consultation with community groups, local media outlets and Mindframe representatives, it was identified that Townsville is a hotspot for journalism cadets.
- A high turnover in journalists requires ongoing training around appropriate language and safe messaging around both mental health and suicide.
- Messaging must be clear and factual, reducing sensationalism especially for youth and First Nations populations.
- There is little to no peer support for vicarious trauma that journalists receive when dealing with tragic circumstances in the community.

## Strategy **nine**

---

**Improving safety and reducing access  
to means of suicide**

# Strategy nine

Local suicide trends and common means are not well understood. There is a lack of timely data, which is important, as implementation of any interventions must be informed by what is happening in the local community.

Restricting access to the means of suicide is one of the most effective suicide prevention strategies. With better data and a regional approach, communities can develop a long-term, strategic approach and drive local efforts in safety and prevention.

## What we know

- Community consultation has indicated a strong focus on Alcohol and Other Drugs community education.
- Community consultation has shown providing Mental Health First Aid, including the First Nations version to public-facing service providers (*i.e. taxi drivers, hairdressers, café staff*) would be a significant, sustainable contribution to this strategy.

# Strategy **ten**

---

## **Inclusion, healing, and transition**

# Strategy ten

Everyone should expect the same rights, opportunities, physical and mental health outcomes as the wider community, free from stigma and discrimination. Strategy 10 is unique to Townsville because of our diverse population and a desire to support the whole of community ensuring equality for all.

## What we know

- Townsville has a high proportion of First Nations peoples with unique culture and language. Cultural safety and sensitivity must be provided to promote inclusion. Those from regional and remote communities may have very different needs and will be less likely to attend mainstream public events and services.
- Townsville has a large population of current and ex-Australian Defence Force personnel.
- Townsville has a fly-in/fly-out mining community that expands with contracts based on mines opening and closing.
- Townsville is a nominated centre to receive refugees/CALD, and thus there is increasing presence and need for inclusion for many different cultures and languages to receive adequate support.
- Rural and remote communities in the region have very different needs, and yet their healthcare and medical support is often centred on Townsville; they have specific needs and require inclusion.
