Geoff's journey

Richmond LGA - Chronic Obstructive Pulmonary Disease

Geoff is a 77-year-old married man who lives on a cattle property 25 minutes out of Richmond. He and his wife are finding it increasingly difficult to remain on the property. Geoff's son and daughter-in-law have recently moved to the property, as it will be handed down to them. Geoff's other son lives in Brisbane. Over the last 5 years, Geoff has had frequent admissions to the Richmond multiple purpose health service due to exacerbation of his COPD. These admissions are now becoming more frequent and for longer periods of time. There has been a severe decline in his health over the last 12 months.

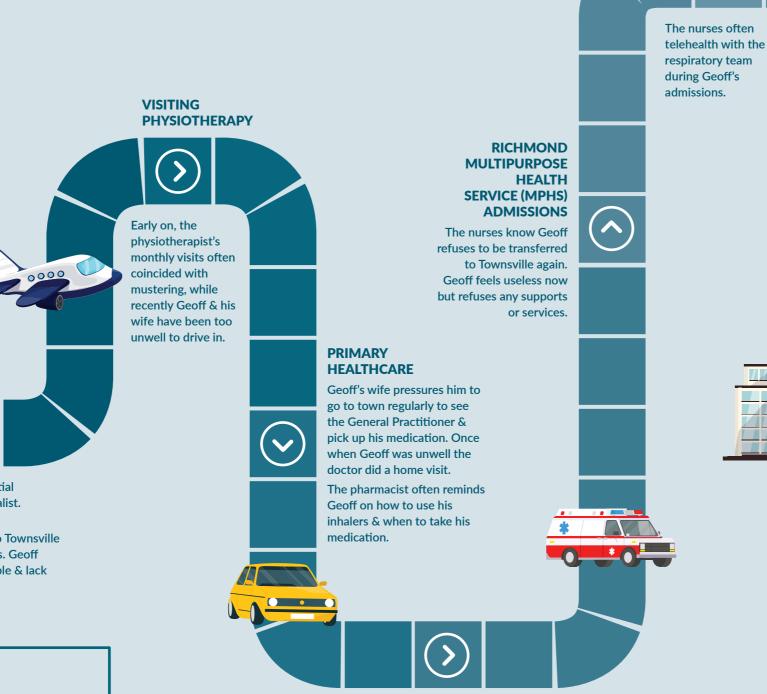

RESPIRATORY SPECIALIST CARE - TOWNSVILLE

It took Geoff a long time to make an initial appointment with the respiratory specialist. He was always too busy with the cattle.

Over the years, Geoff has been flown to Townsville a few times with severe chest infections. Geoff feels uncomfortable with all of the people & lack of fresh air in the hospital there.

Key Themes:

- Health Literacy / Education
- Preference to be in the bush
- Property is just within 50km radius of Richmond
- GP & Community Nurse from MPHS can home visit occasionally when workload allows
- Early referral to specialist palliative care vs generalist palliative care
- Advance Care Planning

HOSPITAL-BASED AMBULANCE

usual. Geoff's son is off mustering.

Geoff's wife calls 000 after finding him in the

garden confused & more short of breath than

The ambulance driver and registered nurse

arrive 45 minutes later. They know Geoff well.

The CELC Townsville project is administered by Palliative Care Queensland and supported by funding from Northern Queensland Primary Health Network (NQPHN) through the Australian Government's PHN program.

that Geoff is no longer

An initiative of

CARER STRESS

TELEHEALTH

With no formal supports, Geoff's son & daughter in law find in very difficult to manage the property and care for Geoff's parents between hospital admissions. Geoff's other son visits for 3 weeks to help.

SPECIALIST PALLIATIVE CARE

Geoff's family are increasingly distressed about his confusion & breathlessness.

They agree to a referral to Specialist Palliative Care Rural Telehealth (SpaRTa).

Potential issues/barriers:

- Pathology courier unavailable Friday pm to Monday am
- Not all medications are readily available
- Reluctance to document wishes
- SpaRTa is a small team with a high workload. During staff leave there can be a 2 week wait for a telehealth appointment
- Palliative care not always considered for respiratory disease

Ruby's journey

Richmond LGA - Multipurpose Health Service -**Renal Failure and Cardiovascular Disease**

Ruby is an 82 year old widowed woman who resides in an aged care bed at the Richmond Multipurpose Health Service (MPHS). Ruby has renal failure and cardiovascular disease secondary to type 1 diabetes. The doctor and nursing staff have noticed a severe decline in Ruby's wellbeing over the last 6 months a reduced appetite, sleeping a lot and reduced mobility.

REGULAR PRIMARY HEALTHCARE

Ruby's General Practitioner (GP) has attended Renal, Cardiology and Endocrinology specialist telehealth appointments with Ruby in the past. The GP has also assessed Ruby when she returned exhausted from her last 1000km round trip to see the cardiologist in Townsville.

Key Themes:

- Remote location 500km to Townsville
- No direct flights to Brisbane
- One doctor is the GP & Hospital Medical Superintendent
- Pathology only available 4 days a week (point of care 24/7)
- Advance care planning moving away vs staying
- Visiting service availability
- Only 4 funded aged care beds at MPHS
- Long standing relationship with Aged Care workers

SPECIALIST PALLIATIVE CARE

the Medical Superintendent refer **Ruby to Specialist Palliative Care Rural** Telehealth (SpaRTa) to assist with pain management, nausea and advance care planning.

NURSING CARE

phn

Richmond MPHS nurses provide ongoing care and receive support from SpaRTa as required via telehealth. Ruby's ageing friends visit occasionally.

An initiative of

The CELC Townsville project is administered by Palliative Care Queensland and supported by funding from Northern Queensland Primary Health Network (NQPHN) through the Australian Government's PHN program.

PalliativeCare

BEREAVEMENT

Ruby dies 1 day after her daughter & grandchildren arrive. The MPHS nurses support the family. The SpaRTa social worker assists the family with referral for ongoing bereavement support.

RUBY'S CONDITION DETERIORATES

Nurse calls Ruby's daughter. SpaRTa recommend a syringe driver. The recommended medications are not available in Richmond. It takes 48hrs for the medications and Ruby's family to arrive.

Potential issues/barriers:

- Timely access to medication, pathology & medical aids
- Ability to make early referral to SPaRTa patient/family consent and early recognition of end stage disease
- SPaRTa input in time to plan for end of life care before imminent death
- · Aged care bed availability
- Telehealth coordination
- Completing demands on generalist workforce (ambulance & acute vs aged care)

HOME CARE PACKAGE

RUBY HAS A FALL

RAC calls 000. Hospital-based ambulance responds. It takes Ruby's only daughter 2 flights and 48hrs to arrive from Brisbane.

RUBY MOVES INTO

RICHMOND MPHS

Ruby's mobility doesn't improve.

She refuses to move to an aged

care facility in Brisbane near her

their difference of opinion. Ruby's

daughter is very distressed when

daughter. The nurses support

Ruby & her daughter through

she must return to Brisbane.
